

MEASURE YOUR COUNTERTOPS

Our consultants will be happy to thoroughly discuss your project and the opportunities we offer for every budget. Because every project is different and the number of options are almost unlimited, we cannot make estimates over the phone. The best place to research your project is to visit us at our showroom and examine the latest cabinet and countertop styles. It will be helpful to the estimation/discussion process if you have a basic drawing and measurements of your current or proposed countertop layout. Please feel free to print and use this form to assist you.

CALL 423-722-0460

- 1) Measure in inches. Start from the outside edge and measure the length along the wall. Measure the width at the edge of the counter from the wall to the front of the countertop.
- 2) Include the overhang in your measurements. Add an inch and a half to any side not bordering a wall or appliance.
- 3) Record the backsplash measurements by measuring from the top of the countertop to the top of the backsplash. Sketch the backsplash onto the drawing along with the measurements.
- 4) Bring your measurements to the Preston Woodworking showroom located at 620 West Walnut Street in Johnson City.
